ULTRAPoint XL Vibra receiver

Accurate and easy-to-use

- Vibration function. The receiver vibrates in the direction of your dog.
- With the help of the receiver's blinking lamps on the display and the increasing volume of the tone together with the vibration function you will easily find the direction of your dog.
- The power is turned on when the receiver is opened, making a separate power switch unnecessary. The power is automatically turned off when the cover is closed.
- You can use either the AUTO button or the sensitivity knob to find the location of your dog.
- Includes an integrated antenna.
- Built-in compass and earplug jack.

ULTRAPoint UHF receiver

Accurate and reliable

- Includes small external antennas.
- By using the sensitivity knob, you can locate the direction and estimate the distance to your dog.
- Blinking lamps in the receiver's display and the differing tone and volume of the sound indicates the direction of your dog.
- Built-in compass and earplug jack.

Transmitter collars for UHF and XL-Vibra

- Light transmitter collars are available in two sizes.
- Transmitter weighs only 120-140 g including the batteries.
- Short, thin, flexible and hardwearing antennas.

An optional function:

A dual-channel ULTRAPoint for two dogs

- The receiver has two different channels (ch1 and ch2), and both dogs have their own transmitter collar with corresponding channels.
